

XM radio is the best technology to come into nation wide radio broadcasting since Marconi first invented it back ions ago, Please do not limit this great technology by passing any laws or rules to stifle XM. It is just plain BS that the NAB is trying to have the FCC limit XMs subscriber base from receiving traffic and weather. XM is the only service that can reach this mobile society from coast to coast, boarder to border. What the NAB fails to understand is FM and AM could care less there too busy playing rap, pop, and other crap to even give local weather much less traffic updates. I hope the wisdom of the FCC does not let this issue get enforced.
